Als we leren het alledaagse op een andere manier te bekijken en, om met Sir Arthur Conan Doyle te spreken, 'de observatie van trivialiteiten' beoefenen, blijkt dat we in de wereld om ons heen veel meer kunnen waarnemen dan we aanvankelijk dachten. Geluiden blijken schaduwen te onthullen. Uit een lichaamshouding valt iemands karakter op te maken. En de onderkant van een blad aan een boom openbaart een wereld op zichzelf. In *Met andere ogen* loopt Alexandra Horowitz door New York, in gezelschap van verschillende deskundigen, onder andere een stadssocioloog, een kunstenares, een geoloog, een arts, een hond en een peuter. Tijdens deze wandelingen wordt duidelijk op welke manier zij de wereld om zich heen waarnemen, en wat ze zien. Horowitz beschrijft de mysteries rond de menselijke waarneming met humor en met oog voor fascinerende details. Dat leidt tot een beter begrip van de

manier waarop wij de wereld en elkaar tegemoet treden en nodigt uit tot een oplettender bestaan. Er valt zo veel meer waar te nemen als we maar de moeite nemen om écht te kijken.

An essential guide to inquiry approach instrumental analysis Analytical Chemistry offers an essential guide to inquiry approach instrumental analysis collection. The book focuses on more in-depth coverage and information about an inquiry approach. This authoritative guide reviews the basic principles and techniques. Topics covered include: method of standard; the microscopic view of electrochemistry; calculating cell potentials; the BerriLambert; atomic and molecular absorption processes; vibrational modes; mass spectra interpretation; and much more. The first scholarly book to address Korean geomancy through an interdisciplinary lens. This book is a milestone in the history of academic research on the development and role of geomancy (fengshui in Chinese and p'ungsu in Korean) in Korean culture and society. As the first interdisciplinary work of its kind, it investigates many topics in geomancy studies that have never been previously explored, and contains contributions from a number of disciplines including geography, historical studies, environmental science, architecture, landscape architecture, religious studies, and psychoanalysis. While almost all books in English about geomancy are addressed to general readers as practical guides for divining auspicious locations, P'ungsu is a work of rigorous scholarship that documents, analyzes, and explains past and current practices of geomancy. Its readers

will better understand the impact of geomancy on the Korean cultural landscape and appreciate the significant ecological principles embedded in the geomantic traditions of Korea; while researchers will discover new insights and inspirations for future research on geomancy not only in Korea, but in China and elsewhere. Hong-key Yoon is Associate Professor of Cultural Geography at the University of Auckland, New Zealand, and the author of *The Culture of Fengshui in Korea: An Exploration of East Asian Geomancy*. The volume begins with an overview of POGIL and a discussion of the science education reform context in which it was developed. Next, cognitive models that serve as the basis for POGIL are presented, including Johnstone's Information Processing Model and a novel extension of it. Adoption, facilitation and implementation of POGIL are addressed next. Faculty who have made the transformation from a traditional approach to a POGIL student-centered approach discuss their motivations and implementation processes. Issues related to implementing POGIL in large classes are discussed and possible solutions are provided. Behaviors of a quality facilitator are presented and steps to create a facilitation plan are outlined. Succeeding chapters describe how POGIL has been successfully implemented in diverse academic settings, including high school and college classrooms, with both science and non-science majors. The challenges for implementation of POGIL are presented, classroom practice is described, and topic selection is addressed. Successful POGIL instruction can

incorporate a variety of instructional techniques. Tablet PC's have been used in a POGIL classroom to allow extensive communication between students and instructor. In a POGIL laboratory section, students work in groups to carry out experiments rather than merely verifying previously taught principles. Instructors need to know if students are benefiting from POGIL practices. In the final chapters, assessment of student performance is discussed. The concept of a feedback loop, which can consist of self-analysis, student and peer assessments, and input from other instructors, and its importance in assessment is detailed. Data is provided on POGIL instruction in organic and general chemistry courses at several institutions. POGIL is shown to reduce attrition, improve student learning, and enhance process skills.

Classroom activities to support a General, Organic and Biological Chemistry text

Students can follow a guided inquiry approach as they learn chemistry in the classroom. General, Organic, and Biological Chemistry: A Guided Inquiry serves as an accompaniment to a GOB Chemistry text. It can suit the one- or two-semester course. This supplemental text supports Process Oriented Guided Inquiry Learning (POGIL), which is a student-focused, group-learning philosophy of instruction. The materials offer ways to promote a student-centered science classroom with activities. The goal is for students to gain a greater understanding of chemistry through exploration. This book brings together the latest perspectives and ideas on teaching modern physical chemistry. It includes perspectives

from experienced and well-known physical chemists, a thorough review of the education literature pertaining to physical chemistry, a thorough review of advances in undergraduate laboratory experiments from the past decade, in-depth descriptions of using computers to aid student learning, and innovative ideas for teaching the fundamentals of physical chemistry. This book will provide valuable insight and information to all teachers of physical chemistry. The new edition of Bruce Wingerd's *The Human Body: Concepts of Anatomy and Physiology* helps encourage learning through concept building, and is truly written with the student in mind. Learning Concepts divide each chapter into easily absorbed subunits of information, making learning more achievable. Since students in a one-semester course may have little experience with biological and chemical concepts, giving them tools such as "concept statements," "concept check" questions, and a "concept block study sheet" at the end of each chapter help them relate complex ideas to simple everyday events. The book also has a companion Student Notebook and Study Guide (available separately) that reinvents the traditional study guide by giving students a tool to help grasp information in class and then reinforce learning outside of class. In the newly updated 7th Edition, *Chemistry: A Guided Inquiry* continues to follow the underlying principles developed by years of extensive research on how students learn, and draws on testing by those using the POGIL methodology. This text follows the principles of inquiry-based learning and correspondingly emphasizes

underlying chemistry concepts and the reasoning behind them. This text provides an approach that follows modern cognitive learning principles by having students learn how to create knowledge based on experimental data and how to test that knowledge. Vols. for 1964- have guides and journal lists. th th The 20 International Conference on Chemical Education (20 ICCE), which had rd th “Chemistry in the ICT Age” as the theme, was held from 3 to 8 August 2008 at Le Méridien Hotel, Pointe aux Piments, in Mauritius. With more than 200 participants from 40 countries, the conference featured 140 oral and 50 poster presentations. th Participants of the 20 ICCE were invited to submit full papers and the latter were subjected to peer review. The selected accepted papers are collected in this book of proceedings. This book of proceedings encloses 39 presentations covering topics ranging from fundamental to applied chemistry, such as Arts and Chemistry Education, Biochemistry and Biotechnology, Chemical Education for Development, Chemistry at Secondary Level, Chemistry at Tertiary Level, Chemistry Teacher Education, Chemistry and Society, Chemistry Olympiad, Context Oriented Chemistry, ICT and Chemistry Education, Green Chemistry, Micro Scale Chemistry, Modern Technologies in Chemistry Education, Network for Chemistry and Chemical Engineering Education, Public Understanding of Chemistry, Research in Chemistry Education and Science Education at Elementary Level. We would like to thank those who submitted the full papers and the reviewers for their timely help in assessing the papers for

publication. th We would also like to pay a special tribute to all the sponsors of the 20 ICCE and, in particular, the Tertiary Education Commission (<http://tec.intnet.mu/>) and the Organisation for the Prohibition of Chemical Weapons (<http://www.opcw.org/>) for kindly agreeing to fund the publication of these proceedings.
