First published in 2006. This book contributes towards a more just appreciation of the relative importance of the different major social groups in the life of the country. It deals in the main with the economic history of the landed interest, and with its role as a social group and includes much agrarian and some industrial history as seen from the landowners' point of view. The first seven chapters of the book aim to present an analysis and description of the main elements in the institutions and way of life of the landed classes, suggesting their significance for society at large, and emphasizing the forces of change which were at work within an order which in many ways presented a remarkably stable appearance to the outside world. The last five chapters take up the theme of change and examine the dynamic elements in the economic social and political life of the group, in a sequence of chronological subdivisions of the century and a half with which this book is concerned. The big landlords of eastern Germany have loomed large in the country's

history, but the absence of official statistics on landownership has left their position and identity confined to folklore, without satisfactory quantification. This study, making extensive use of primary sources from the seven 'core provinces' of eastern Germany-the so-called 'East Elbian' region-establishes answers to questions pivotal to our understanding of pre-war Germany: who were the biggest landowners, both by area and by the tax assessment of their land? Which social groups held land? How much land did they own and where? How did this change, especially during the last decades before the Great War? Professor Eddie demonstrates that most of the inroads into landownership by the bourgeoisie had already been made by the mid-1850s, perhaps even before the mid-1830s. However, one of the most interesting findings in this study is that, despite rapid industrialization after 1880, there was a net exodus of the nouveaux riches from the ranks of large land owners. On the eve of war, the largest landowners were the Prussian state, the royalty, and the higher nobility. Meticulously researched and thoroughly documented, this book will be the benchmark for all future work in this area.
