Database research and development has been remarkably successful over the past three decades. Now the field is facing new challenges posted by the rapid advances of technology, especially the penetration of the Web and Internet into everyone's daily life. The economical and financial environment where database systems are used has been changing dramatically. In addition to being able to efficiently manage a large volume of operational data generated internally, the ability to manage data in cyberspace, extract relevant information, and discover knowledge to support decision making is critical to the success of any organization. In order to provide researchers and practitioners with a forum to share their experiences in tackling problems in managing and using data, information, and knowledge in the age of the Internet and Web, the First International Conference on Web-Age Information Management (WAIM 2000) was held in Shanghai, China, June 21-23. The inaugural conference in its series was well received. Researchers from 17 countries and regions, including Austria, Australia, Bahrain, Canada, China, France, Germany, Japan, Korea, Malaysia, The Netherlands, Poland, Singapore, Spain, Taiwan, UK, and USA submitted their recent work. Twenty-seven regular and 14 short papers contained in these proceedings were presented during the two-day

conference. These papers cover a large spectrum of issues, from classical data management such as object-oriented modeling, spatial and temporal databases to recent hits like data mining, data warehousing, semi-structured data, and XML. In this timely volume, geoscientists from both industry and academia present a contemporary view of salt at a global scale. The studies examine the influence of salt on synkinematic sedimentation, its role in basin evolution and tectonics, and ultimately in hydrocarbon prospectivity. Recent improvements in seismic reflection, acquisition and processing techniques have led to significant advances in the understanding of salt and sediment interactions, both along the flanks vertical or overturned salt margins, and in subsalt plays such as offshore Brazil. The book is broadly separated into five major themes covering a variety of geographical and process-linked topics. These are: halokinetic sequence stratigraphy, salt in passive margin settings, Central European salt basins, deformation within and adjacent to salt, and salt in contraction settings and salt glaciers. This is a book which considers several isomer-enumeration methods in organic chemistry. Three main topics are exemplified here: viz., theorem of polya, coset representation theory and marks of a group (method of Fujita) and wreath and generalized wreath product groups (method of Balasubramanian). Rigorous proofs have been replaced by an example-oriented, intuitive approach which exposes many problems of real chemical importance. The Chemistry of Heterocyclic Compounds, since its inception, has been recognized as a cornerstone of heterocyclic chemistry. Each volume attempts to discuss all aspects – properties, synthesis, reactions, physiological and industrial significance – of a specific ring system. To keep the series up-to-date, supplementary volumes covering the recent literature on each individual ring system have been published. Many ring systems (such as pyridines and oxazoles) are treated in distinct books each consisting of separate volumes or parts dealing with different individual topics. With all authors are recognized authorities, the Chemistry of Heterocyclic Chemistry is considered worldwide as the indispensable resource for organic, bioorganic, and medicinal chemists.

Ayodhya tussle - For Hindus, Ram Janma Bhoomi is a "Place of Veneration" and for Muslims, Babri Masjid is a "Place of Ritual Prostration". The Babri Masjid (Mosque of Babur), the Tughlaq-style mosque, was built in 1528 by General Mir Baqi on the orders of Zahir-ud-din Muhammad Babur, the founder and first emperor of the Mughal dynasty in the Indian subcontinent. The building is facile with Islamic architectural elements but devoid of minarets (Call Towers for prayers), etc. The Babri Masjid was neither a mausoleum nor a cenotaph. The placing of Ram Lalla Idol on December 22, 1949 inside the Babri Masjid Central Dome became the aggravating point of the title dispute. The blood-curdling Ram-Janma-Bhoomi-Babri-Masjid dispute is over a tiny area of 2.77 acres of land out of the 3.287 million square kilometre vast tract of India. Solutions from the erstwhile British rulers and Indian Prime Ministers found no results. At last, it was the reign of the 14th Prime Minister of India, Mr. Narendra Damodardas Modi, that witnessed the lawful solution – amicable both for the Hindus and for the Muslims. Now, t

golden era of peace and prosperity, brotherhood and tolerance has blossomed in the Indian soil. The "Basic Structure" (Justice, Liberty, Equality and Fraternity) enshrined in the Preamble of the Indian Constitution has been reaffirmed by this landmark judgment. We can assert that this book takes you to the inroads of the cementing facts and figures of the Ayodhya Dispute unravelled by this unanimous historical judgment of the Supreme Court of India.

In recent years there has been a remarkable convergence of interest in programming languages based on ALGOL 60. Researchers interested in the theory of procedural and object-oriented languages discovered that ALGOL 60 shows how to add procedures and object classes to simple imperative languages in a general and clean way. And, on the other hand, researchers interested in purely functional languages discovered that ALGOL 60 shows how to add imperative mechanisms to functional languages in a way that does not compromise their desirable properties. Unfortunately, many of the key works in this field have been rather hard to obtain. The primary purpose of this collection is to make the most significant material on ALGoL-like languages conveniently available to graduate students and researchers.
