The first chapter focuses on something specific: Survival in the jungle. As we all know, the jungle is beautiful but also infested with bacteria, bugs, venomous and predatory animals, and full of both toxic and edible plants. Learning what to do there can make all the difference if you were ever to make it through in such a climate. After this, the book highlights what to do in case of a hurricane or an earthquake, two disasters that could very well happen in many people's areas. Third, we will talk about food preservation, since this is one of the most important and basic survival skills everyone should have. Last but not least, we'll go over some self-defense techniques and gadgets people could use to defend themselves if they ever get attacked or cornered. Do you know how to prepare for a catastrophe Have you got the survival skills you need? Well you're about to discover how to PREP for any situation!... Disasters can come in any form and at any time. Worse still, they are quite likely to strike you when you are least prepared to welcome them. And when a disaster does hit you, especially if it's a strong, devastating one, you are likely to succumb to its fierce blow. Even if you do manage to survive the initial attack, you won't be able to last for a long time if you haven't prepared beforehand for it. The extreme weather conditions, lack of the 'normal' food supply, lack of proper shelter, inability to make a fire, attacks from other people and animals and a lot more can cause slow and painful death such that you wish you could just have died when the disaster first hit. Keep in mind that you can only survive for about 3 minutes without air, 3 hours without a synchronized body temperature, 3 days without water, and about 3 weeks without food.
