IBM® System z® servers offer a full range of connectivity options for attaching peripheral or internal devices for input and output to the server. At the other end of these connections are a variety of devices for data storage, printing, terminal I/O, and network routing. This combination of connectivity and hardware offer System z customers solutions to meet most connectivity requirements. However, to make use of these features, the System z server must be properly configured. This IBM Redbooks® publication takes a high-level look at the tools and processes involved in configuring a System z server. We provide an introduction to the System z channel subsystem and the terminology frequently used in the hardware definition process. We examine the features and functions of tools used in the hardware definition process, such as HCD, CHPID Mapping Tool, and HCM. We discuss the input and output of these tools (IODF, IOCP, IOCDS) and their relationship to one another. We also provide a high-level overview of the hardware configuration process (the flow of generating a valid I/O configuration). We provide configuration examples using both HCD and HCM. The book also discusses available new functions and guidelines for the effective use of HCD and HCM. This document is intended for system programmers and administrators who are responsible for defining and activating hardware changes to z/OS® and System z servers, and for the IBM representatives who need this information. General knowledge of z/OS and IOCP is assumed. Digital editing gives editors far greater freedom than ever before to move scenes of information around and place them anywhere in a film's sequence. Apple's Final Cut Pro is the most widely used Mac-based digital editor, and is especially popular with independent filmmakers and graphic artists. Final Cut Pro 5 Editing Essentials enables readers to master the craft of digital editing on Apple's Final Cut Pro. This full-color editing workshop features eight tutorials that provide firsthand experience with the art and technique of editing. This CRJ 200 Aircraft Systems Study Guide will help you walk into your oral exam with confidence. This study guide covers all of the CRJ 200 systems in an efficient question/answer format. Reading and reviewing systems information in a manual doesn't necessarily challenge a pilot's knowledge of the aircraft. Reading a question and trying to answer it from memory is much more challenging and provides positive feedback. STOP going through your systems manual trying to figure out what you know and what you don't know. After going through this study guide a few times, you will easily organize what you know and what you don't know on the CRJ 200. This kind of organization will make it much easier and faster to study for your next CRJ checkride. Need a better way to study for a CRJ training event? Try the Aviation Study Made Easy System. Over 1,200 questions with answers The average time to go through a system chapter in our book, after organizing the information, is 15 minutes Easy to quiz yourself 100% of your study time will be spent on information you don't know Easily organize all of the systems information for future training events Build your confidence Whether you are studying for an initial training event or recurrent training, this book will help you prepare efficiently. Whether you've mastered the basics of Final Cut Pro and want to take your skills to the next level, or if you're a video editor new to Final Cut Pro and looking to put your own system together, this book is for you. Written by "chawla," a Final Cut Pro guru and veteran moderator on 2-Pop/Creative Cow, this book covers the interface basics and workflow but goes beyond to address intermediate techniques and timesaving tips for professional results. Roberts does not assume you have an IT staff on hand and therefore goes into crucial issues of set up, configuration, consumer advice on hardware purchasing, and troubleshooting. Equally valuable is coverage of working with formats such as standard definition, uncompressed, and FireWire DV. At issue are the relative utility and requirement for information exchange between aircraft regarding the current "state" and/or the "intent" of each aircraft. This paper presents the experimental design and some initial findings of an experimental research study designed to provide insight into the issue of intent information exchange in constrained en-route operations and its effect on pilot decision making and flight performance. Two operational modes for autonomous operations were compared in a piloted simulation. The tactical mode was characterized primarily by the use of state information for conflict detection and resolution and an open-loop means for the pilot to meet operational constraints. On 2 September 1998, Swissair Flight SR 111 departed New York, on a scheduled flight to Geneva, Switzerland, with 215 passengers and 14 crew members on board. About 53 minutes after departure, the flight crew smelled an abnormal odour in the cockpit. They decided to divert to the Halifax International Airport. They were unaware that a fire was spreading above the ceiling in the front area of the aircraft. They would never make it to Halifax, 20 minutes after the first detection of smoke in the cabin the aircraft crashed in the North Atlantic near Peggy's Cove, Nova Scotia, Canada. There were no survivors, 229 people died in the incident. The Army AH-64A Helicopter Systems Theory of Operation manual (TM 1-1520-238-T-9) may be used in conjunction with the wiring information in the Army AH-64A Helicopter Wiring Diagrams manual to troubleshoot any fault not isolated by the appropriate maintenance operational check and the associated fault isolation procedures. It provides troubleshooting information and theory of operation information for the Army AH-64A Helicopter only. Statistical software testing is a promising technique for reducing the software testing burden by applying test cases to the software under test according to a model of the expected usage of the system in operation, called an operational profile. However, current statistical testing techniques have not been put into general practice, as they do not scale well as the complexity of the systems under test increases. In particular, as system complexity increases, the matrices required to generate test cases and perform model analysis can grow dramatically, even exponentially, overwhelming the test generation and analysis applications. In this work, a new technique for representing the operational profile is proposed to mitigate the complexity issue for statistical test case generation. The use of a state-based requirements specification model as the basis of the operational profile leverages parallelism to reduce the visible size of the model. The specification model can then be extended to include conditional probabilities of input data occurrence. * This work also proposes a statistical testing framework using this specification-based operational profile to generate and execute test cases. Such a framework allows us to evaluate the effectiveness and efficiency of this statistical testing technique. This book constitutes the refereed proceedings of the 6th International Symposium on NASA Formal Methods, NFM 2014, held in Houston, TX, USA, April 29 - May 1, 2014.
