Issues in Science Teaching Oct 16 2022 Draws together a range of issues in the teaching of science into one volume. This book encourages students and newly qualified teachers to consider and reflect on issues so that they can make reasoned judgements about their teaching.

Global Environmental Issues Jan 07 2022 Global Environmental Issues, second edition builds on the popularity of the first edition, viewing global environmental problems as complex issues with a network of causes, influenced by a range of actors with differing priorities. The book recognises that science underpins much of what happens in society and therefore it is important to be able to interpret the environmental and social consequences of scientific developments. In addition to discussing the main biophysical causes, the book illustrates how socio-economic and political factors determine why and how people use land, resources and technology, and how this in turn affects natural resource management. This edition includes new chapters on the politics of science, International environmental regulation and treaties, environmental issues in a globalised world and natural resource management. Global Environmental Issues, second

edition is essential reading for upper level undergraduates and Masters students within departments of Environmental Science and Geography. Includes case studies from around the world to provide a real life context for the issues tackled in each chapter Considers both the results of human actions and natural environmental change in order to provide balanced, in-depth debate Includes coverage of contemporary 'hot topics' such as biodiversity, globalization and sustainable development Chapters authored by experts in the field Includes new chapters on The politics of science, International environmental regulation and treaties , Environmental issues in a globalised world and Natural Resource Management Expanded sections include negotiating multilateral environmental agreements, GM crops, biofuels and marine and freshwater resources

Issues in Science and Theology: What is Life? Apr 10 2022 This book explores the concept of Life from a range of perspectives. Divided into three parts, it first examines the concept of Life from physics to biology. It then presents insights on the concept from the perspectives of philosophy, theology, and ethics. The book concludes with chapters on the hermeneutics of Life, and pays special attention to the Biosemiotics approach to the concept. The question 'What is Life?' has been deliberated by the greatest minds throughout human history. Life as we know it is not a substance or fundamental property, but a complex process. It is not an easy task to develop an unequivocal approach towards Life combining scientific, semiotic, philosophical, theological, and ethical perspectives. In its combination of these perspectives, and its wide-ranging scope, this book opens up levels and identifies issues which can serve as intersections for meaningful interdisciplinary discussions of Life in its different aspects. The book includes the four plenary lectures and selected, revised and extended papers from workshops of the 14th European Conference on Science and Theology (ECST XIV) held in Tartu, Estonia, April 2012.

A Study of Interactions Aug 22 2020 Scholars-and adults in general-have pondered for centuries the mysterious processes that influence the ways in which children gradually become adults. The development of professional organizations and journals devoted to adolescence, as well as increasing appreciation in academia and the world of policy for the importance of this phase of life, have helped this field catch up with the pace of research on other stages of human development particularly infancy and early childhood. The development of a comprehensive review of research on adolescence depends in large part on the perceived need for such a synthesis and the extent to which different research fields as well as policy and practice would benefit from such an effort. To address these issues, the National Research Council and the Institute of Medicine, through the Board on Children, Youth, and Families, held a two-day workshop in September 2005. The workshop was designed as an opportunity for an interdisciplinary group to explore the different strands of research that contribute to understanding adolescence. In the brief time available, the group was not asked to address the entire range of issues related to adolescent health and development, but rather to provide an initial explanation of issues that a longer term study might address. *A Study of Interactions* summarizes the major themes discussed at the workshop. It begins with an overview of what adolescence is and current views of the processes that shape development in the second decade of life. It explores the transdisciplinary research issues already presented in this field, as well as issues raised in discussions of goals for the field's future. A closing section describes the presenters' thoughts on the feasibility of launching an in depth contextual study that could more firmly establish connections among the many fields of study concerned with adolescence.

Critical Issues and Bold Visions for Science Education Mar 17 2020 *Critical Issues and Bold Visions for Science Education* addresses diverse critical issues using rich theoretical frameworks and methodologies, and while retaining complexity, offers transformative visions within a context of political tensions, historical legacies, and grand challenges associated with Anthropocene.

Environmental Science For Dummies Oct 24 2020 The easy way to score high in Environmental Science Environmental science is a fascinating subject, but some students have a hard time grasping the interrelationships of the natural world and the role that humans play within the environment. Presented in a straightforward format, *Environmental Science For Dummies* gives you plain-English, easy-to-understand explanations of the concepts and material you'll encounter in your introductory-level course. Here, you get discussions of the earth's natural resources and the problems that arise when resources like air, water, and soil are contaminated by manmade pollutants. Sustainability is also examined, including the latest advancements in recycling and energy production technology. *Environmental Science For Dummies* is the most accessible book on the market for anyone who needs to get a handle on the topic, whether you're looking to supplement classroom learning or simply interested in learning more about our environment and the problems we face. Presents straightforward information on complex concepts Tracks to a typical introductory level Environmental Science course Serves as an excellent supplement to classroom learning If you're enrolled in an introductory Environmental Science course or studying for the AP Environmental Science exam, this hands-on, friendly guide has you covered.

Current Issues in Libraries, Information Science and Related Fields Nov 05 2021 This volume is unusual in that the theme is quite broad in scope yet focused on a specific topic; innovations and boundary-pushing studies in areas not usually found in library literature. It examines the periphery of the field surveyed in previous volumes. The chapters are grouped in two categories: professional issues and transforming services.

Capacity-building In Science And Technology In The Third World Apr 17 2020 Drawing on the history and sociology of science and studies of knowledge application and public policy, this book builds a prescriptive model that addresses the problem of capacity-building in the Third World.

The World Food Situation Jan 27 2021 At the beginning of the 1970's, global

grain reserves were level and food prices were low however as the decade progressed crop production plummeted leading to a food crisis. Originally published in the aftermath in 1977, Crosson and Frederick set out to explore the ability of agricultural output to meet the global food demands of future generations. This study analyses how resources and environmental factors would affect food production in developing countries and the United States until the end of the 21st Century. The environmental impacts of land levels, fertiliser and pesticide use are explored in relation to the challenges of meeting food demands. This title will be of interest to students of environmental studies.

Mediating Science Learning Through Information and Communications Technology May 19 2020 Developments in information technology are bringing about changes in science education. This Reader focuses on the theoretical and practical consideration of using information and communications technologies in teaching and learning. It examines current approaches to teaching and learning in science at various levels of education, and ways in which science is made more accessible. This will include the future potential of such current developments as access to practical work delivered on the web. The Reader is divided into three sections: What are the current issues in using ICT to teach and learn in science? Designing and evaluating ICT to teach and learn science Extending access to science learning This is a companion book to *Reconsidering Science Education*, also published by RoutledgeFalmer. *Mediating Science Learning Through ICT* is a valuable resource for teachers on Masters courses in science education and academics in science education.

Current Issues in the Philosophy of Science Sep 15 2022 This collection of six symposia, with 24 prominent philosophers and scientists participating, concentrates on many of the most significant issues and controversies at the frontiers of philosophical and scientific enlightenment. The discussions clarify basic issues and problems and go on to suggest new avenues for their resolution. Each contribution is original; none has been published before. These fascinating give-and-take sessions among eminent thinkers simulate the reader to do his own thinking about fundamental problems in the logic and methodology of science. Among the problems discussed are the epistemological foundations of science, the logic of quantum theory, philosophy of space and

time, and methodology of psychology. -- from dust jacket.

Connecting Science and Engineering Education Practices in Meaningful Ways Feb 14 2020 The need for a scientifically literate citizenry, one that is able to think critically and engage productively in the engineering design process, has never been greater. By raising engineering design to the same level as scientific inquiry the Next Generation Science Standards' (NGSS) have signaled their commitment to the integration of engineering design into the fabric of science education. This call has raised many critical questions...How well do these new standards represent what actually engineers do? Where do the deep connections among science and engineering practices lie? To what extent can (or even should) science and engineering practices co-exist in formal and informal educational spaces? Which of the core science concepts are best to leverage in the pursuit of coherent and compelling integration of engineering practices? What science important content may be pushed aside? This book, tackles many of these tough questions head on. All of the contributing authors consider the same core question: Given the rapidly changing landscape of science education, including the elevated status of engineering design, what are the best approaches to the effective integration of the science and engineering practices? They answered with rich descriptions of pioneering approaches, critical insights, and useful practical examples of how embodying a culture of interdisciplinarity and innovation can fuel the development of a scientifically literate citizenry . This collection of work builds traversable bridges across diverse research communities and begins to break down long standing disciplinary silos that have historically often hamstrung well-meaning efforts to bring research and practice from science and engineering together in meaningful and lasting ways.

Science for Better Environment Jan 19 2023 *Science for Better Environment: Proceedings of the International Congress on the Human Environment (HESC)* focuses on the applications of science in health, human settlements, and protection of the environment. The selection first offers information on the background of HESC, including human settlements and habitat, environment and development, natural disasters, and energy. The text then discusses human's place in natural ecosystems, along with essential properties of ecosystem, auto-regulation in ecosystem, and collapse of symbiosis between human and nature. The compilation presents a summary of the environmental problems in Japan, including progress and outstanding issues in the environmental field. The water pollution from 1970 to 1975 and air pollution control in the country are underscored. The text also explains the development of antipollution laws in the country. Topics include local government antipollution laws, creation of antipollution laws, and clarifying the responsibility of industries in antipollution drives. The book also touches on the role of scientists in the task of achieving a better environment; challenges of stress on human health in urban ecosystems; and environmental problems on a global scale. The selection is a dependable reference for readers interested in the application of science for the improvement of the environment.

National Issues in Science and Technology 1993 May 11 2022 This volume consists of four "white papers," prepared for the Clinton administration as it took office, on important national policy issues in which science and

technology play a central role. Topics covered are science and technology leadership, climate change policy, technology policy and industrial innovation, and health care reform. Also included are brief summaries of ten potentially high impact reports issued by various committees of the National Research Council.

Issues in Science and Theology: Are We Special? Dec 06 2021 This book offers a penetrating analysis of issues raised by the perennial question, 'Are We Special?' It brings together scholars from a variety of disciplines, from astronomy and palaeontology to philosophy and theology, to explore this question. Contributors cover a wide variety of issues, including what makes humans distinct from other animals, the possibilities of artificial life and artificial intelligence, the likelihood of life on other planets, and the role of religious behavior. A variety of religious and scientific perspectives are brought to bear on these matters. As a whole, the book addresses whether the issue of human uniqueness is one to which sciences and religions necessarily offer differing responses.

Encyclopedia of Science and Technology Communication Dec 26 2020 The explosion of scientific information is exacerbating the information gap between richer/poorer, educated/less-educated publics. The proliferation of media technology and the popularity of the Internet help some keep up with these developments but also make it more likely others fall further behind. This is taking place in a globalizing economy and society that further complicates the division between information haves and have-nots and compounds the challenge of communicating about emerging science and technology to increasingly diverse audiences. Journalism about science and technology must fill this gap, yet journalists and journalism students themselves struggle to keep abreast of contemporary scientific developments. Scientist - aided by public relations and public information professionals - must get their stories out, not only to other scientists but also to broader public audiences. Funding agencies increasingly expect their grantees to engage in outreach and education, and such activity can be seen as both a survival strategy and an ethical imperative for taxpayer-supported, university-based research. Science communication, often in new forms, must expand to meet all these needs. Providing a comprehensive introduction to students, professionals and scholars in this area is a unique challenge because practitioners in these fields must grasp both the principles of science and the principles of science communication while understanding the social contexts of each. For this reason, science journalism and science communication are often addressed only in advanced undergraduate or graduate specialty courses rather than covered exhaustively in lower-division courses. Even so, those entering the field rarely will have a comprehensive background in both science and communication studies. This circumstance underscores the importance of compiling useful reference materials. The *Encyclopedia of Science and Technology Communication* presents resources and strategies for science communicators, including theoretical material and background on recent controversies and key institutional actors and sources. Science communicators need to understand more than how to interpret scientific facts and conclusions; they need to understand basic elements of the politics, sociology, and philosophy of science, as well as relevant media and communication theory, principles of risk communication, new

trends, and how to evaluate the effectiveness of science communication programmes, to mention just a few of the major challenges. This work will help to develop and enhance such understanding as it addresses these challenges and more. Topics covered include: advocacy, policy, and research organizations environmental and health communication philosophy of science media theory and science communication informal science education science journalism as a profession risk communication theory public understanding of science pseudo-science in the news special problems in reporting science and technology science communication ethics.

Recent Advances in Environmental Science from the Euro-Mediterranean and Surrounding Regions Oct 12 2019 This volume includes the papers presented during the 1st Euro-Mediterranean Conference for Environmental Integration (EMCEI) which was held in Sousse, Tunisia in November 2017. This conference was jointly organized by the editorial office of the Euro-Mediterranean Journal for Environmental Integration in Sfax, Tunisia and Springer (MENA Publishing Program) in Germany. It aimed to give a more concrete expression to the Euro-Mediterranean integration process by supplementing existing North-South programs and agreements with a new multilateral scientific forum that emphasizes in particular the vulnerability and proactive remediation of the Euro-Mediterranean region from an environmental point of view. This volume gives a general and brief overview on current research focusing on emerging environmental issues and challenges and its applications to a variety of problems in the Euro-Mediterranean zone and surrounding regions. It contains over five hundred and eighty carefully refereed short contributions to the conference. Topics covered include (1) innovative approaches and methods for environmental sustainability, (2) environmental risk assessment, bioremediation, ecotoxicology, and environmental safety, (3) water resources assessment, planning, protection, and management, (4) environmental engineering and management, (5) natural resources: characterization, assessment, management, and valorization, (6) intelligent techniques in renewable energy (biomass, wind, waste, solar), (7)

sustainable management of marine environment and coastal areas, (8) remote sensing and GIS for geo-environmental investigations, (9) environmental impacts of geo/natural hazards (earthquakes, landslides, volcanic, and marine hazards), and (10) the environmental health science (natural and social impacts on Human health). Presenting a wide range of topics and new results, this edited volume will appeal to anyone working in the subject area, including researchers and students interested to learn more about new advances in environmental research initiatives in view of the ever growing environmental degradation in the Euro-Mediterranean region, which has turned environmental and resource protection into an increasingly important issue hampering sustainable development and social welfare.

Basic Issues in the Philosophy of Science Nov 17 2022

Science Diplomacy Jun 19 2020 As modern foreign policy and international relations encompass more and more scientific issues, we are moving towards a new type of diplomacy, known as "Science Diplomacy." Will this new diplomacy

of the 21st century prove to be more effective than past diplomacy for the big issues facing the world, such as climate change, food and water insecurity, diminishing biodiversity, pandemic disease, public health, genomics or environmental collapse, mineral exploitation, health and international scientific endeavours such as those in the space and the Antarctic? Providing a new area of academic focus that has only gathered momentum in the last few years, this book considers these questions by bringing together a distinguished team of international specialists to look at various facets of how diplomacy and science are influenced by each other. The book not only dissects the ways that politics, science and diplomacy have become intertwined, but also highlights how the world's seemingly most intractable problems can be tackled with international collaboration and diplomacy that is rooted in science, and driven by technology. It, therefore, challenges the conventional wisdom concerning the juxtaposition of science and the world of diplomacy.

Governance and Sustainability of Responsible Research and Innovation Processes Jan 15 2020 This book provides methods and practical cases and experiences with the aim of stimulating Responsible Research and Innovation (RRI) through the direct engagement of researchers, Civil Society Organisations (CSOs), citizens, industry stakeholders, policy and decision makers, research funders and communicators. The book furthermore aims to advance debate on Responsible Research and Innovation and also to reinforce the RRI community identity. With chapters covering governance, public engagement and inclusion in responsible R&D and innovation processes; RRI actions in science education and communication; gender and ethical issues in RRI initiatives; and sustainability of RRI processes, the book is solidly part of the Europe 2020 strategy to promote a vision for a stronger collaborations between social, natural and physical scientists and the societal actors for a wider dimensions of science and innovation and the role in environmental preservation. Chapters 1 and 3 are open access under a CC BY 4.0 license via link.springer.com.
