This edited volume is an introduction to diverse methods and applications in operations research focused on local populations and community-based organizations that have the potential to improve the lives of individuals and communities in tangible ways. The book's themes include: space, place and community; disadvantaged, underrepresented or underserved populations; international and transnational applications; multimethod, cross-disciplinary and comparative approaches and appropriate technology; and analytics. The book is comprised of eleven original submissions, a re-print of a 2007 article by Johnson and Smilowitz that introduces CBOR, and an introductory chapter that provides policy motivation, antecedents to CBOR in OR/MS, a theory of CBOR and a comprehensive review of the chapters. It is hoped that this book will provide a resource to academics and practitioners who seek to develop methods and applications that bridge the divide between traditional OR/MS rooted in mathematical models and newer streams in 'soft OR' that emphasize problem structuring methods, critical approaches to OR/MS and community engagement and capacity-building. This book describes the properties of case study designs in organizational research, exploring the uses, advantages and limitations of case research. It also demonstrates the flexibilities which case designs offer, and challenges the myths surrounding this approach. Business & Management students using the book will be able to assess the applicability of case studies to their own research and, if appropriate, will also be able to design for themselves a creative case study strategy that will not only answer their original research questions, but also address questions they didn't consider when the research began. The Mastering Business Research Methods series provides practical guidance on using specific methods of data collection and data analysis. Expert authors, and series editors Bill Lee, Mark N K Saunders and Vadake K Narayanan, share their extensive experience on how to get the best from each method, through clear, understandable and applied examples. Ideal for Business & Management students studying for a Master's degree, each book provides all they need to know before employing a particular research method for their dissertation. Elgar Research Agendas outline the future of research in a given area. Leading scholars are given the space to explore their subject in provocative ways, and map out the potential directions of travel. They are relevant but also visionary. Managing and organizing are now central phenomena in contemporary societies. It is essential they are studied from a variety of perspectives, and with equal attention paid to their past, their present, and their future. This book collects opinions of trailblazing scholars concerning the most important research topics, essential for study in the next 15-20 years. The opinions concern both traditional functions, such as accounting and marketing, personnel management and strategy, technology and communication, but also new challenges, such as diversity, equality, waste and cultural encounters. The collection is intended to be inspiration for young scholars and an invitation to a dialogue with practitioners. The book's contributions are written by well-established scholars. Each is a leader in their field and will remain important figures for the next twenty years and beyond. Each chapter starts with a short summary of the present situation but focuses on the future of the discipline. The contributors cover practically all subfields of what is called business administration, or management and organization studies and include contain topics that are new, such as invisible organizations or encounters between art, popular culture and organizing. Outlining the future and the state of the art, this comprehensive and innovative book is an essential resource for students and academics seeking to be at the forefront of future research in management and organization studies. Contributors include: Y. Benschop, T. Beyes, F. Cochoy, F. Cooren, H. Corvellec, J. Costas, A. Diedrich, M.-L. Djelic, G.S. Drori, C. Grey, M. Kornberger, M. Kostera, W.J. Orlikowski, M. Parker, P. Quattrone, C. Rhodes, S.V. Scott, J. Smolinski, J.-S. Vayre Stressing the need to build caring, supportive relationships with and among students, Elementary Classroom Management: Lessons from Research and Practice offers research-based guidance on effective classroom management. It addresses current concerns about student motivation and helps prospective and beginning teachers develop a philosophy of classroom management that focuses on building connections with students and creating safe, caring classrooms. The trusted text profiles five master teachers (grades K, 1, 3, 4 and 5) in very different school settings as they create classrooms that are orderly and productive, humane and caring. The integration of the thinking and the actual management practices of five real elementary teachers into discussions of research-based management principles prompts readers to connect theories with actual results. Further, the text demonstrates how real teachers can adapt to any circumstances--physical room constraints, curriculum requirements, challenging behaviors--and still be successful.

The SAGE Handbook of Qualitative Business and Management Research Methods provides a state-of-the-art overview of qualitative research methods in the business and management field. Bringing together a team of leading international researchers, the chapters offer a comprehensive overview of the key methods and challenges encountered when undertaking qualitative research in the field. The chapters have been arranged into three thematic parts: Part One examines a broad spectrum of contemporary methods, from autoethnography and discourse analysis, to shadowing and thematic analysis. Part Two presents an overview of key visual methods, such as photographs, drawing, video and web images. Part Three explores methodological developments, including aesthetics and smell, fuzzy set comparative analysis, and beyond. A collection of essays on a general theory of management using the field of research as a point of reference. It includes essays on the expectations of jobs of research, the individual and the research job, Research organization and the management jobs, aspects of human relations, and managerial technologies. Due to its societal and economic relevance, Project Management (PM) has become an important discipline and a concept critical to modern organizations, public and private. PM as an academic discipline is discussed both in Management Science and in Operations Research. Management Science tends to focus on quantitative tools and the soft skills necessary to manage projects successfully. Operations Research gives the essential scientific contribution to the success of project management through the development of models and algorithms. In Management Science, Operations Research and Project Management, José Ramón San Cristóbal Mateo fills the gap between scientific research and the practical application of that research. Project managers need formal training in decision-making but sometimes, they do not have an in-depth knowledge of Operations Research or they lack the necessary theoretical background. This book, with its focus on the quantitative models of Operations Research and Management Science applied to Project Management, provides project managers with the tools and methods necessary to manage projects successfully. Project managers operate in a complex global environment, in which numerous factors need to be considered, such as minimizing total project costs, meeting contracted dates, and ensuring that activities achieve certain quality levels. The focus here on the application of quantitative models of Operations Research and Management Science applied to Project Management provides them with the tools and methods necessary to make sound decisions. The Handbook of Research Management is a unique tool for the newly promoted research leader. Larger-scale projects are becoming more common throughout the social sciences and humanities, housed in centres, institutes and programmes. Talented researchers find themselves faced with new challenges to act as managers and leaders rather than as individual scholars. They are responsible for the careers and professional development of others, and for managing interactions with university administrations and external stakeholders. Although many scientific and technological disciplines have long been organized in this way, few resources have been created to help new leaders understand their roles and responsibilities and to reflect on their practice. This Handbook has been created by the combined experience of a leading social scientist and a chief executive of a major international research development institution and funder. The editors have recruited a truly global team of contributors to write about the challenges they have encountered in the course of their careers, and to provoke readers to think about how they might respond within their own contexts. This book will be a standard work of reference for new research leaders, in any discipline or country, looking for help and inspiration. The editorial commentaries extend its potential use in support of training events or workshops where groups of new leaders can come together and explore the issues that are confronting them. Typically, reports that get published as Research Reports report on a single topic, selected aspects of a more complex study, or interim results of long research studies. In-print publications are available free of charge (unless otherwise noted) and can be download or ordered online. Monographic compilation of conference papers on the implementation of scientific management and operational research in the USA - covers research methods in respect of innovations in management techniques, the use of models in studying the occupational psychology aspects of behaviour, management information systems, etc. Conference held in pittsburgh 1973 November 15 to 17. Diagrams and references. "This book is a compendium of research that proves to be an indispensable resource for cutting-edge knowledge in service science that is understood as a broad research field that embodies all the aspects that relate to services, their planning, design, operation, evaluation, and improvement"--Provided by publisher. For many post-graduate students undertaking a research project for the first time is a daunting prospect. Gaining the knowledge and skills needed to do research typically has to be done alongside carrying out the project itself. Students often have to conduct their research independently, perhaps with limited tutor contact. What is needed in such situations is a resource that supports the new researcher on every step of the research journey, from defining the project to communicating its findings. Management Research: Applying the Principles provides just such a resource. Structured around the key stages of a research project, it is designed to provide answers to the questions faced by new researchers but without neglecting the underlying principles of good research. Each chapter includes 'next steps' activities to help readers apply the content to their own live research project. The companion website provides extensive resources, including video tutorials, to support the development of practical research skills. The text reflects the richness and variety of current business and management research both in its presentation of methods and techniques and its choice of examples drawn from different subject disciplines, industries and organizations. Management Research: Applying the Principles combines diversity of coverage with a singularity of purpose: to help students complete their research project to a rigorous standard.
