Highway Drainage Design Manual Hydrology Dec 07

2021 This manual was originally produced with English units of measurement (dated March 1993 with revisions dated April 1994). The Metric Edition is essentially the same manual, but with numeric values in metric units of measurement. The manual is intended to provide guidance for the performance of flood hydrology for

Arizona Department of Transportation (ADOT) drainage design. Two analytic methods are presented, herein, to determine design discharges, and those two methods are to be used mainly for ungaged watersheds. The two analytic methods are: (1) the Rational Method that can be used for uniform drainage areas that are not larger than 160 acres in size, and (2) rainfall-runoff modeling for any size drainage area. The rainfall-runoff modeling guidance is structured to be compatible with the HEC-1 Flood Hydrology program by the U.S. Army Corps of Engineers. For rainfall-runoff modeling, this manual should be used in conjunction with the HEC-1 Users Manual, and the contents of this manual assume a familiarity and basic understanding of the HEC-1 program and modeling procedures. A flood frequency analysis procedure is provided for computing flood magnitude-frequency relations where systematic stream gaging records of sufficient length are available. Three indirect methods are presented for estimating flood peak discharges. This manual was prepared for use by engineers and/or hydrologists that are trained and experienced in the fundamentals of hydrology in general, and flood hydrology in particular.
