AR 420-1 02/12/2008 ARMY FACILITIES MANAGEMENT , Survival Ebooks A new edition to Taunton's "Build Like a Pro" series allows amateurs to build kitchen cabinets with professional polish, complete with advice on

design, selecting materials and hardware, and finishing styles. This text shows the reader how to plan and develop a restaurant or foodservice space. Topics covered include concept design, equipment identification and procurement, design principles, space allocation, electricity and energy management, environmental concerns, safety and sanitation, and considerations for purchasing small equipment, tableware, and table linens. This book is comprehensive in nature and focuses on the whole facility—with more attention to the equipment—rather than emphasizing either front of the house or back of the house. Contains alphabetically arranged entries that provide step-by-step instructions, with tips, techniques, tools, and templates, for residential construction projects, including tiling, dry wall, electric, heating and air conditioning, siding, and much more. Includes CD-ROM with instructions for each job. Basic Plumbing Services Skills: Gas Services has been written to address AQF Level 2 competencies of the Construction, Plumbing and Services Training Package (CPC08). This volume extends the basic knowledge and offers more in-depth theoretical and technical skills, and is divided into Fundamentals and Installation Practice. This pedagogy helps students develop knowledge and then apply it. Between the eleventh and fifteenth centuries, the social and cultural worlds of medieval Europe and the Eastern Mediterranean were transformed by the religious impetus of the crusades. Today we bear witness to these transformations in the material and environmental record revealed by new archaeological excavations and reappraisals of museum collections. This volume highlights new archaeological knowledge being developed by scholars working in the fields of history, archaeology, numismatics, and architecture to demonstrate its potential to change and augment our understanding of the crusades. The 16 chapters in this volume deploy a contemporary scientific approach to archaeology of the crusades to give an up-to-date account into the diverse range of research in this area. They explore five key themes: the implications of scientific methods, new excavations and surveys, architectural analyses, sigillography, and the application of social interpretations. Together these chapters provide a new way of approaching the study of the crusades, and demonstrate the value of taking a holistic view that utilises the full diverse range of evidence available to us. Having weaned themselves completely from fossil fuels in their conventional 1930s urban house, Stephen and Rebekah Hren provide a map for others to do the same. Their book shows first how to reduce energy consumption, then to

retrofit existing homes to obtain all heating, cooling, cooking, refrigeration, hot water, and electricity from renewable resources. The Hrens also provide advice on sustainable, low-impact methods of transportation and home gardening. These practical approaches, many of which are suitable for renters as well as owners, fit anyone's budget and can be implemented over time to progressively liberate a home from fossil-fuel dependency.--COVER.
