Industrial Construction Estimating Manual focuses on industrial process plants and enables the contractor, subcontractor, and engineer to use methods, models, procedures, formats, and technical data for developing industrial process plant construction estimates. The manual begins with an introduction devoted to labor, data collection, verification of data, coding, productivity measurement, the unit quantity model, and computer-aided cost estimating. It goes on to provide information on construction materials, database systems, work estimating, computer-aided estimating, detailed labor estimates, bid assurance, and detailed applications to construction. Practical examples based on historical data collected from past installations are also included as well as a detailed glossary, Excel and mathematical formulas, metric/standard conversions, area and volume formulas, and boiler man-hour tables. Industrial Construction Estimating Manual aids contractors, subcontractors, and engineers with a balance-detailed estimating method using the unit quantity model and is an excellent resource for those involved in engineering, technology, and construction estimating. Provides a detailed estimating method using the unit-quantity model to prepare construction estimates Delivers information on construction materials, databases, labor estimates, computer-aided estimating, bid assurance, and applications to construction. Utilizes historical data, from a database of previous similar work, calculates material cost and labor by category, and produces both summary and detailed man-hour and cost estimates. This classic reference has built a reputation as the "go to" book to solve even the most vexing pipeline problems. Now in its seventh edition, Pipeline Rules of Thumb Handbook continues to set the standard by which all others are judged. The 7th edition features over 30% new and updated sections, reflecting the exponential changes in the codes, construction and equipment since the sixth edition. The seventh edition includes: recommended drill sizes for self-tapping screws, new ASTM standard reinforcing bars, calculations for calculating grounding resistance, national Electrical Code tables, Corliss meters, pump seals, progressive cavity pumps and accumulators for lubricating systems. * Shortcuts for pipeline construction, design, and engineering * Calculations methods and handy formulas * Turnkey solutions to the most vexing pipeline problems This manual's latest edition continues to be the best source available for making accurate, reliable man-hour estimates for electrical installation. This new edition is revised and expanded to include installation of electrical instrumentation, which is used in monitoring various process systems. : Production and composite rate. Boilers and heaters. Classification equipment. Compressors and air dryers. Conveyors and bucket elevators. Crystallizers. Dow therm units. Dry material blenders

and feeders. Dryers and flakers. Dust collectors. Ejectors. Extractors. Fans and blowers. Filters. Flotation machines. Gas holders. Generators. Heat exchangers, evaporators, and condensers. Heating, ventilating, air-conditioning, and air-handling units. Hoist-overhead electric. Mixers and blenders. Pumps. Scales. Separators. Size reduction equipment. Thickeners. Vessels, reactors, and tanks. Waste treating equipment. Water treating equipment. Plate welding. Insulation and waterproofing. Supports. Pipe connections. Earthwork. Concrete. Scaffolding. Weight tables. Sample estimating form. Concrete as a building material -- Concrete mix compounds -- Proportioning concrete mix -- Excavation -- Laying out the building -- Design of concrete forms -- Form materials and how to use them -- Construction of pier and footing forms -- Construction of foundation wall forms -- Formwork for openings in concrete walls -- Formwork for steps -- Formwork for floors and sidewalk slabs -- How to make beam and girder forms -- Forms for arched openings -- Handling and placing concrete -- Finishing concrete -- Curing and patching concrete -- Effects of temperature -- Reinforced concrete construction -- Precast concrete -- Cleaning concrete and masonry methods -- Appendix A : Method of making slump test for consistency of Portland cement concrete -- Appendix B : Estimating quantities and labor hours for concrete, forms and reinforcing. September 1, 2021-: "Since 1922, management and technical professionals from petroleum refining, gas processing, petrochemical/chemical and engineer/constructor companies throughout the world have turned to Hydrocarbon Processing for high quality technical and operating information. Through its monthly magazine, website and e-newsletters, Hydrocarbon Processing covers technological advances, processes and optimization developments from throughout the global Hydrocarbon Processing Industry (HPI). Hydrocarbon Processing editors and writers provide real-world case studies and practical information that readers can use to improve their companies' operations and their own professional job skills."--taken from publisher web site. From the Book - Preface: This manual has been compiled to provide time frames, labor crews and equipment spreads to assist the estimator in capsulizing an estimate for the installation of cross-country pipelines, marshland pipelines, nearshore and surf zone pipelines, submerged pipelines, wharfs, jetties, dock facilities, single-point mooring terminals, offshore drilling and production platforms and equipment and appurtenances installed thereon. The time frames and labor and equipment spreads which appear throughout this manual are the result of many time and method studies conducted under varied conditions and at locations throughout the world; these time frames and labor and equipment spreads reflect a complete, unbiased view of all operations involved. When one is engaged in compiling an estimate from any information furnished by others, as is the case with this manual, he should view it in an objective light, giving due consideration to the nature of the project at hand and evaluating all items that may affect the productivity of labor and all other elements involved. Industrial Piping and Equipment Estimation Manual delivers an invaluable resource for day-to-day operations. Packed full of worksheets covering combined and simple cycle power plants, refineries, compressor stations, ethanol, hydrogen and biomass plants, this reference helps the construction engineer and estimator learn how to create bids where scope and quantity differences can be identified and project impacts estimated. Beginning with an introduction devoted to labor, productivity measurement, estimating methods, and factors affecting construction labor productivity and impacts of overtime, the author then explores equipment through hands-on estimation tables, including sample estimates and statistical applications. The book rounds out with a glossary, abbreviations list, formulas, and metric/standard conversions, and is an ideal reference for estimators, engineers and managers with the level of detail and equipment breakdown necessary for today's industrial operations. Includes day-to-day worksheets to help users estimate equipment and piping for any plant or refinery project Presents the comparison method to estimate similarities and differences between proposed and previously installed equipment Helps users understand and produce more accurate direct costs with sample estimates An important guide to the quantification of contract claims in the construction industry, updated third edition The substantially expanded third edition of Evaluating Contract Claims puts the spotlight on the quantification of claims in the construction industry after liability has been established, including by reference to the terms of several standard forms of contract in common use. The authors clearly demonstrate the potential alternative approaches to quantification, the processes, principles and standard of analysis required to produce acceptable claims for additional payment.

The third edition covers a number of heads claims not considered in previous editions and offers an important guide for those working with building or engineering contracts. Evaluating Contract Claims explains in detail how the base from which evaluation of additional payments may be established, the effect of changes on the programme of work and the sources of information for evaluation of additional payments. The book also contains information for evaluating the direct consequences of change in terms of the impact on unit rates, and evaluating of the time consequences of change in terms of prolongation, disruption, acceleration and more. This important book: Concentrates on the quantification of contract claims after liability has been established Offers a guide that is appropriate for any form of contract Considers the potential alternative approaches to quantification of different heads of claim Contains the principles and methods that should be reflected in the evaluation of claim quantum Includes the standard of substantiation which may be required Presents information that is equally applicable in both building and engineering disputes Is substantially expanded from its previous editions Written for construction and engineering contract administrators, project managers, quantity surveyors and contract consultants, Evaluating Contract Claims offers a revised third edition to the essential guide for quantifying claims in the construction industry once liability has been established. Industrial Process Plant Construction Estimating and Man-Hour Analysis focuses on industrial process plants and enables the estimator to apply statistical applications, estimate data tables, and estimate sheets to use methods for collecting, organizing, summarizing, presenting, and analyzing historical man-hour data. The book begins with an introduction devoted to labor, productivity measurement, collection of historical data, verification of data, estimating methods, and factors affecting construction labor productivity and impacts of data. It goes on to explore construction statistics and mathematical spreadsheets, followed by detailed scopes of work ranging from coal-fired power plants to oil refineries and solar plants, among others. Man-hour schedules based on historical data collected from past installations in industrial process plants are also included as well as a detailed glossary, Excel and mathematical formulas, area and volume formulas, metric/standard conversions, and boiler man-hour tables. Industrial Process Plant Construction Estimating and Man-Hour Analysis aids industrial project managers, estimators, and engineers with the level of detail and practical utility for today's industrial operations and is an ideal resource for those involved in engineering, technology, or construction estimation. Identify quantity differences with the comparison method and eliminate impacts between proposed and previously installed equipment Understand how to implement statistical and estimating methods, scopes of work, man-hour tables and estimate sheets to produce direct craft man-hour estimates, RFPs, and field change orders Set up and utilize Excel templates to automate statistical functions that will perform mathematical applications key to process plant construction Offers coverage of each important step in engineering cost control process, from project justification to life-cycle costs. The book describes cost control systems and shows how to apply the principles of value engineering. It explains estimating methodology and the estimation of engineering, engineering equipment, and construction and labour costs The author has had wide experience in cost and labour estimating, having worked for some of the largest construction firms in the world. He has made and assembled numerous types of estimates including lump-sum, hard-priced, and scope, and has conducted many time and method studies in the field and in fabricating shops. John S. Page has received the Award of Merit from the American Association of Cost Engineers in recognition of outstanding service and cost engineering Good, No Highlights, No Markup, all pages are intact, Slight Shelfwear, may have the corners slightly dented, may have slight color changes/slightly damaged spine. This publication is an extremely useful tool to budget the amount of man hours to consume in the process pipe assemblies. I argue that a reliable estimate of the number of man-hours required for the execution of a project is an essential need for the optimum functioning of any construction or Installation Company. Use this Tool to budget the amount of man hours direct to consume in your offers Most medium to large construction contracts include a claim for extra payment for variations and changes or for disruption to the programme. A number of books address the legal and contractual basis for such claims, but few if any show how such claims should be quantified. This book will provide a detailed guide to evaluating such claims, showing how they are priced and how a valid claim is prepared. Clear, practical and comprehensive, this mechanical estimating manual provides an indispensable

resource for anyone involved with estimating mechanical costs on construction projects. Covering time-proven methodologies and procedures, it offers a full range of ready-to-use forms, detailed estimating guidelines, and numerous completed examples. Readers will learn from leading experts how to produce complete and accurate sheet metal, piping and plumbing estimates quickly and easily. Including a wealth of labor and price data, formulas, charts and graphs, it offers clear guidance for use in planning and scheduling work, budgeting, cost control and accounting, and various other aspects of mechanical estimating. This reference provides reliable piping estimating data including installation of pneumatic mechanical instrumentation used in monitoring various process systems. This new edition has been expanded and updated to include installation of pneumatic mechanical instrumentation, which is used in monitoring various process systems. Estimator's Piping Man-hours Tool Estimating Man-hours for Process Piping Project - Manual of man-hours, Examples The author of this Manual, has an expertise of 45 years in his professional work as Head of Work, Project Manager and finally as president of a Company of Constructions and Industrial Assemblies in different plants of Chemical Processes, Refineries, Pipelines, Gas Compressors and Thermal Power plants of their country and abroad, exercising the direction of the works and the control of the resources used for their execution, particularly in the case of installation of piping. This Manual that gives the Reader is the fruit of that Technical Expertise. Tables for calculating manpower in Piping The direct man hours indicated in the 14 (fourteen) tables of this Manual have been verified by the Author during the course of the Piping assemblies of the different installations. Estimating Man hours for piping installation It is important to understand that there are no identical projects or jobs in this business and that it is not possible to automate or copy. The approach to respect is that any estimate work should be serious and professional, this Manual provides the Reader with a precise and convenient method to estimate the direct work in Piping installations for each specific project. In the content of this book, the Reader will access simple and reliable procedures to realize the estimates. Examples of calculating Piping installations In the Manual the author presents complete calculation examples of Piping installations, based on the man hours indicated by the tables to later apply the corrections or adjustments needed for each Project. Estimators and Proprietors of Companies The purpose of this publication is to give the estimator and the business owner a reliable instrument for the unique task of estimating man hours with precision. Developed over the course of many years of on-the-job projects involving HVAC energy auditing, testing/balancing and cost estimating, and refined through feedback from thousands of engineers and technicians who have used them, the forms contained in this manual are concise, comprehensive, and optimally organized for easy reference. Complete sets of forms are provided for all aspects of testing and balancing, energy auditing, indoor quality diagnosis, and load calculations. The first edition, entitled HVAC Energy Audit & Balancing Forms Manual compiled these time-saving forms for the first time in a single reference. This enhanced second edition adds a new chapter on technical management, providing procedures for achieving thorough, systematic and accurate problem solving, troubleshooting and decision making in building systems management and contracting. Produce accurate estimates for nearly any residence in just minutes. This handy manual has the shortcuts and tables you need to find the quantity of materials and labor for most residential construction. Includes overhead and profit, how to develop unit costs for labor and materials, and how to be sure you've considered every cost in the job. Written by an expert in the field. This publication is an extremely useful tool to budget the amount of man hours to consume in the process pipe assemblies. This time-saving reference allows users to get results instantly without putting pencil to paper or fiddling with a calculator. Job-simplifying Fast Code Facts and Sensible Shortcut boxes Packed with calculations, formulas, charts and tables NEW CHAPTER on estimating take-offs Great for designing or estimating a project First published in 2006. Clear, practical and comprehensive, this mechanical estimating manual provides an indispensable resource for contractors, estimators, owners and anyone involved with estimating mechanical costs on construction projects, including a wealth of labor and price data, formulas, charts and graphs. Covering timeproven methodologies and procedures, it offers the user a full range of readytouse forms, detailed estimating guidelines, and numerous completed examples. You'll learn from leading experts how to produce complete and accurate sheet metal, piping and plumbing estimates both quickly and easily. The manual will also be of value to supervisors, mechanics, builders, general contractors, engineers and architects for use in planning and scheduling work, budget estimating, cost control, cost accounting, checking change orders and various other aspects of mechanical estimating. This comprehensive reference covers the full spectrum of technical data required to estimate costs for major construction projects. Widely used in the industry for tasks ranging from routine estimates to special cost analysis projects, the book has been completely updated and reorganized with new and expanded technical information. RSMMeans Estimating Handbook will help construction professionals: Evaluate architectural plans and specifications Prepare accurate quantity takeoffs Compare design alternatives and costs Perform value engineering Double-check estimates and quotes Estimate change orders FEATURES: This new edition includes expanded coverage of: Construction specialties—green building, metal decking, plastic pipe, demolition items, and more Preliminary or square foot estimating tools Updated city cost indexes to adjust costs—by trade—for 30 major cities Historic indexes to factor costs for economic effects over time Complete reorganization to the newest CSI MasterFormat classification system Written by engineers for engineers (with over 150 International Editorial Advisory Board members),this highly lauded resource provides up-to-the-minute information on the chemical processes, methods, practices, products, and standards in the chemical, and related, industries.
