"Current physics and cosmology have left us with a confusion of empirically-derived models which do not yet combine into a coherent structure and which are most often ad hoc. Wegener is surely right in believing that the only way to tackle this problem is to go back to the foundations, and he has used skills acquired in many different disciplines to show us that a coherent solution is now within our grasp. I thoroughly enjoyed reading his book." Peter Rowlands, Physics Department, University of Liverpool. Handboek voor de uitvoering van ICT-projecten volgens een internationale, gezaghebbende standaard. The effort of anthropometric historians to unearth the broad patterns of human biological well-being has led to the examination of nearly forgotten, centuries-old records from dusty archives in practically all the continents of the globe. French historians in the Annales tradition were among the first to adopt methods from physical anthropology and from the biological sciences, but the real expansion of the field dates from the pathbreaking work of Richard

Steckel and Robert Fogel, which launched the discipline of anthropometric history on American soil. Research has confirmed that physical stature is related to nutritional status and therefore to real family income, and thus to the general standard of living. Historians and development economists will find this line of research useful, as it informs us about the standard of living of members of society for whom data on wages are seldom available—women, children, aristocrats, farmers, and slaves. In addition, this research has shown that the biological standard of living may diverge from conventional indicators of welfare during the early stages of industrialization. Thus, per capita income is an ambiguous measure of welfare during some phases of growth, and it must be supplemented with data from other indicators, such as physical stature. The essays in this volume broaden our knowledge of the human effects of the momentous economic changes of the last two centuries, extending analysis to regions for which such information has been lacking, including Russia, Canada, Indonesia, Italy, and Spain.
