Geropsychology - the field of psychology concerned with the psychological, behavioural, biological, and social aspects of aging - has developed rapidly in the past decade. This clinical casebook describes current best practice in managing complex cases involving common mental health issues in later life, by leading authorities in the field. Each title in the Allyn & Bacon Johnson & Grant Casebook Series presents three to four in-depth cases in a different topic area, prefaced by an introduction to generalist social work practice. Allyn & Bacon Casebook Series for Mental Health, First Edition by Jerry Johnson and George Grant provides students with personal and intimate glimpses into the thinking and actions of experienced practitioners working with clients

on mental health issues. The contributors to this casebook combined many decades of social work experience and teaching to create a one-of-a-kind tool for students to study and analyze how practitioners think about practice. The authors move beyond the belief that practice involves finding "correct" interventions to solve client problems, and instead invite students to review and challenge the work of others to help them understand what compromises important practice decision with real clients in real practice settings. Using real cases based in the South Pacific, Asia, South and Latin America and Europe, this volume sets out examples of community-based interventions that have succeeded by implementing outreach to the families and community to identify those in need, reliable and adequate drug supplies, treatment interventions, healthy psychosocial environments. This book will interest mental health professionals, international public health workers, global program administrators, and clinicians and healthcare workers. Cases are the heart of this text, which is organized into four parts by increasing complexity. Each case is accompanied by three expert commentaries, simulating the experience of meeting with a panel of supervisors or consultants who are among the best in the field. DSM-5® Casebook and Treatment Guide for Child Mental Health updates the previous companion to DSM-IV-TR with new cases and advances from DSM-5 and evidence-based assessment and treatment in child and adolescent mental health. The book presents 29 cases written by experts in the field to provide readers with realistic examples of the types of patients that clinicians encounter in practice. Each case is accompanied by two commentaries from leading clinicians (including child and adolescent psychiatrists, psychologists, social workers, developmental behavioral pediatricians and nurses), who provide their perspective on diagnostic formulation and treatment recommendations, focusing either on psychotherapy or psychopharmacology. Experts draw from a combination of evidence-based assessment and interventions, biopsychosocial approaches, a systems perspective, and commonsense thinking. Thus each chapter provides an opportunity to see how field leaders would approach the diagnosis and treatment of a child or adolescent. The collaboration among the case authors and commentators yields an approach that is flexible and expansive enough to be of help to clinicians of varied disciplines working in child and adolescent mental health. Down-to-earth and engaging, DSM-5® Casebook and Treatment Guide for Child Mental Health is a rich repository of clinical wisdom that seasoned practitioners, clinicians early in training, and child and adolescent psychiatrists studying for their board exams will find extremely useful. Uses a case study method to teach students clinical assessment skills for working in the mental health field Organized by types of disorders, Mental Health in Social Work: A Casebook on Diagnosis and Strengths-Based Assessment emphasizes DSM diagnoses of mental disorders that are commonly seen in clinical and social service settings. Becoming conversant with the DSM will allow readers to: 1) offer clients appropriate referrals and treatment; 2) communicate effectively with other mental health professionals; and 3) be eligible for third-party reimbursement. While gaining competence with DSM diagnosis, the reader will also learn to understand

clients holistically as they proceed with the assessment and intervention process. In this update, the ordering of the chapters and content in the chapters themselves have been revised to reflect the changes in the DSM-5. Learning objectives are now included in each chapter. Advancing Core Competencies Series - As part of the Advancing Core Competencies Series, this title is designed to help students apply CSWE's competencies and practice behaviors examples to specialized fields of practice. Readers will gain experience answering licensing-type higher-level thinking questions tied to the competencies. "Organized by types of disorders, *Mental Health in Social Work: A Casebook on Diagnosis and Strengths-Based Assessment* emphasizes DSM diagnoses of mental disorders that are commonly seen in clinical and social service settings. Becoming conversant with the DSM will allow readers to: 1) offer clients appropriate referrals and treatment; 2) communicate effectively with other mental health professionals; and 3) be eligible for third-party reimbursement. While gaining competence with DSM diagnosis, the reader will also learn to understand clients holistically as they proceed with the assessment and intervention process."--Publisher's website. "This key text presents an accessible and diverse exploration of spirituality in mental health practice, broadening the definition of spirituality to comprise a variety of transcendent experiences. Chapters include a brief history of the tensions of spirituality in mental health practice and consider a range of emerging topics, from spirituality among the elderly and energy work (Reiki), to spirituality in addiction recovery, incarceration, and hospice work. Rich case examples are woven throughout and the book is paired with podcasts that can be applied across chapters, illuminating the narrative stories and building active listening and teaching skills"-- The guide opens with an overview of the history of the positive in psychiatry, a summary of the effectiveness of positive interventions, and an over-arching conceptualization of the field of positive psychiatry. Thirteen detailed cases follow, organized into three sections: mental health, medical care, and educational and coaching interventions. "The Mental Health Review Board [was established to] conduct reviews of, and hear appeals by, people with a mental illness being treated involuntarily, either as inpatients or on Community Treatment Orders. Casebook III is a comprehensive collection of significant decisions during the period 1997-2003. Two casebooks have been produced by the Board covering 1987-1997 and are incorporated in this volume."--Case. Preface; The study of the history of medicine, and especially that of psychiatry, often induces in the modern reader an understandable sense of relief that he or she is living in today's world, and not at any point in the past. Yet the stories of the patients in this book, representatives of many hundreds admitted to Bethlem Hospital in the late Victorian period, will resonate with all who take an interest in mental health care today. In these early years of our own twenty-first century, the fear and stigma associated with major mental illness remain strong. Psychiatrists and professionals in allied disciplines involved in the care and treatment of people with mental health problems still face disorders of uncertain aetiology that devastate the lives of sufferers and their families and for which there are no 'cures'. The advent of effective treatments for mood

disorders and the symptoms of psychosis, some fifty years after the events detailed in this book, did of course result in tremendous improvements in prognosis and the alleviation of suffering. The nineteenth-century casebooks of Bethlem Hospital give relatively little information about the physical and chemical treatments. The school years tend to be the healthiest period of life, but it is also when mental health problems often begin or become more apparent, due in part to the challenges posed by unique educational and socialization expectations and physical and psychological developmental changes. The majority of youth negotiate these challenges well, drawing upon a range of resources to see them through: innate reserves of resilience, healthy coping strategies and supportive school and home environments. But every now and then, a young person falters and stumbles. Gentle support and guidance, informed by knowledge and skills, can make all the difference for the troubled youth. Providing this informed support and guidance is the role of the school counsellor. This casebook is intended to provide a solid foundation for counselling practice in schools. This is an accessible guide, training tool and resource for school counsellors, educational and clinical psychologists, school teachers, social workers and other health professionals working in all countries to provide services to schoolgoing youth. Is it ethical to treat a death row inmate only to stabilize him or her for eventual execution? What happens when a military provider receives highly sensitive intelligence from a client? How can clinicians refuse costly gifts from clients without damaging the therapeutic relationship? Should a therapist disclose a client's suicidal intent to the authorities? In *Ethical Conundrums, Quandaries and Predicaments in Mental Health Practice*, these and other real-life scenarios constitute a comprehensive and definitive ethics casebook for mental health professionals. Inspired by the many difficult situations they themselves have faced, an eminent group of accomplished mental health clinicians provide first-hand accounts of ethical problems that defy boilerplate solutions. Each chapter begins with a compelling and ethically complex case followed by an illustrative yet succinct analysis of the key ethical issues present and a personal reflection on the case itself, along with the process of ethical reasoning used to arrive at a final decision. Every case concludes with key recommendations for promoting ethical practice within an often challenging work setting. Highlighting the human aspect of ethics in mental health practice through the use of mesmerizing narratives while also provoking the reader to reflect upon what is the "right" thing to do, *Ethical Conundrums, Quandaries and Predicaments in Mental Health Practice* offers trainees and seasoned professionals alike invaluable informative models for dealing with ethical dilemmas, as well as the inspiration to confront seemingly insurmountable clinical problems. This casebook tackles the common psychiatric illnesses that physicians experience during these early stages of their careers. The cases carefully present guidelines for assessment and management, along with clinical pearls and resources for further reference. Written by experts in the field, the text is designed to be valuable for physicians engaged in medical education and training, and specifically for the psychiatrists who provide care for other physicians. Each chapter includes a unique case and discussion. Topics

include: onset of a mood and or psychotic disorder, life transitions, trauma in care, physician suicide, anxiety, and other issues that are part of the experience of young adults developing their personal and professional identities. *Early Career Physician Mental Health and Wellness* is an excellent guide for all physicians interested in mental health and wellness, including psychiatrists, psychologists, training directors, hospital leadership, mentors, students, residents, and others. Many psychiatrists, obstetricians, primary care physicians, nurse practitioners, and other health care professionals have not been trained to adequately identify psychiatric disorders that present in postpartum women, and yet are often faced with patients expressing mental health symptoms that may lead to serious problems. *Postpartum Mental Health Disorders: A Casebook* offers brief, practical guidance on the recognition and management of postpartum mental health disorders, including depression, anxiety disorders, obsessive compulsive disorder (OCD), psychotic disorders, bipolar disorders, posttraumatic stress disorders, personality disorders and eating disorders. Written by experienced clinicians, chapters are organized into collections of case examples and are designed to provide at-a-glance information about diagnoses, treatment, and outcomes with advice on when to refer to a specialist. Each chapter also includes an assessment tool to assist with diagnosis and a list of risk factors for developing postpartum disorders. An appendix of screening questionnaires is provided at the end of the book. *Substance Abuse and Mental Health Practice: A Casebook on Co-occurring Disorders* provides readers with illuminating, complex cases that shed light on how experienced practitioners think about practice, struggle to resolve practice dilemmas, and make clinical decisions to meet the needs of clients with co-occurring disorders. The opening chapter presents the Advanced Multiple Systems (AMS) approach, gleaned from the editors' 80 years of combined professional experience and providing readers with a series of guiding practice principles to use while reading the evaluating cases. In following chapters, cases are presented in the form of in-depth narratives. Through an informative storytelling, readers learn about individuals struggling with substance abuse, mental health disorders, racial identity, trauma, and parental rights. In additional chapters, readers are provided with standard assessment forms and challenged to make clinical sense of clients' information and their complex lives. The final chapter reviews best practice methods in the field of co-occurring disorders. *Substance Abuse and Mental Health Practice* is part of the Cognella Casebook Series for the Human Services, a collection of textbooks that challenge students to learn through example, build critical competencies, and prepare for effective, vibrant practice. Jerry L. Johnson is an associate professor in the School of Social Work at Grand Valley State University. He received his Ph.D. in sociology from Western Michigan University. Johnson has been in the human services field since 1983, serving as a family therapist, clinical supervisor, administrator, consultant, teacher, trainer, and author. George Grant, Jr. is the dean of the College of Community and Public Service and a professor in the School of Social Work at Grand Valley State University. He received his Ph.D. in sociology from Western Michigan University. Grant, Jr. is a professor, administrator, evaluator,

practitioner, and consultant. "This is a modern multi-disciplinary text confronting a complex age and journey into recovery. It is a roadmap for every student of mental health who wants to put the most up-to-date practice fuel into their tank. The case study approach offers an authentic insight into life experiences of service users and allows the reader to re-think the relationship they have with vulnerable people in the middle of sensitive life challenges." Dr Dean-David Holyoake, University of Wolverhampton, UK

This engaging book consists of 27 case studies which offer a realistic and insightful view into the experience of mental ill-health. A range of mental health problems are considered for people at different stages of the lifespan, from common problems such as anxiety or depression, through to severe and enduring conditions such as schizophrenia. Part of a new Case Book series, the book is written in an informative and clear style and utilises the latest evidence-based interventions and resources. The approach adopted: Incorporates recovery based principles Emphasizes the importance of collaborative working Values the person's perspective Actively empowers and advocates for the person to make their own decisions and choices

Written and edited by academic experts and experienced clinicians, the cases all take a positive, person-centred approach focusing on recovery outcomes. The book addresses the biological, psychological, social and physical aspects in scenarios and includes areas of mental health which are often overlooked, such as alcohol and substance misuse amongst older adults. Mental health nurse training involves focusing on working with individuals one-to-one in a range of settings, and this case book will reflect and complement the skills and situations students face while training and on placement. Contributors: Geoffrey Amoateng, Jean-Louis Ayivor, May Baker, Alison Coad, Hilary Ford, Sally Goldspink, John Harrison, Mark McGrath, Michael Nash, Cliff Riordan, Heather Rugg, Noel Sawyer, Vanessa Skinner, Steve Wood. This book illustrates the multifaceted applications of clinical psychology in multi-cultural contexts. It considers people's emotional, cognitive, interpersonal and psychological development across their lifespans. The book explores nine multicultural clinical cases that illustrate clinical assessment, biopsychosocial formulation, and evidence-based therapy. Further, it provides therapy outcomes for diverse clients throughout their lifespans, e.g. for cognitive behavioral therapy, integrative therapy, and narrative therapy; and examines clinical findings on e.g. social and emotional development, family trauma, child sexual abuse and its impact, as well as culturally sensitive assessment and interventions for a range of mental health issues. Further cases focus on co-morbid conditions, and physical ailments, across the lifespan. Bringing together contributions from both academics and practitioners, the book illustrates practical applications of theories and concepts relevant to the practice of clinical psychology. It also reviews the relevant literature with clinical recommendations, and provides multicultural perspectives and insights into contemporary clinical approaches from experienced clinical supervisors and practitioners, who are also academics and educators in the field. Accordingly, the book offers a valuable asset for students, academics, researchers and practitioners, as well as for postgraduate clinical training. "The book's genuine value is that it provides

the reader with a solid foundation in ethical competence. The ten-step ethical decision-making model described is a clear, structured roadmap to aid in the resolution of common ethical problems. A welcome resource to all geriatric mental health students, practitioners, and educators." -- From the Afterword by Frank A. Cervo, MD, Long Island State Veterans Home, Stony Brook University School of Medicine

Detailed case studies will guide practitioners through Bush's "Four A's" of ethical decision-making:

- Anticipating and preparing for ethical issues commonly encountered in specific contexts
- Avoiding ethical misconduct
- Addressing ethical challenges with specific strategies and goals
- Aspiring to even higher standards of ethical decision making and practice

Making informed, ethical decisions and choosing the right course of action with elderly patients can prove difficult for mental health practitioners. This is especially true when patients suffer from Alzheimer's disease or other disorders that impair their own decision-making abilities. When confronting dilemmas concerning privacy, informed consent, and patient autonomy, use of an ethical decision-making model is essential. In this book, Bush not only presents this practical, 10-step model, but through a diverse collection of case studies, also demonstrates how it can be implemented across numerous therapeutic settings. Nursing, social work, counseling, and psychiatry are only four of the many settings discussed. In essence, the author offers a truly unique, interdisciplinary approach to ethical decision-making in geriatric mental health care.

Imbued with a shared passion for children's mental health, the DSM-IV-TR® Casebook And Treatment Guide For Child Mental Health reflects its editors and contributors' conviction that through the meticulous presentation and careful study of cases, diagnosis.

"Postpartum Mental Health Disorders: A Casebook describes the recognition and management of psychiatric disorders that present in the postpartum period. Case vignettes illustrate the type of complaints that may present to the psychiatrist, primary care physician, obstetrician, nurse practitioner, doula or other health care professionals. Chapters cover depression, anxiety disorders, obsessive compulsive disorder (OCD), psychotic disorders, bipolar disorders, posttraumatic stress disorders, personality disorders and drug abuse. Each chapter includes information about differential and provisional diagnoses, epidemiology, treatment and prognosis with advice as to when to refer to a specialist. More general chapters address risk factors for developing postpartum disorders, prevention and the uses and safety of psychotropic medication during breastfeeding. Two frequently used screening questionnaires are included with instructions as to use. Some key references or links are included"

-- Forensic mental health assessment (FMHA) continues to develop and expand as a specialization. Since the publication of the First Edition of Forensic Mental Health Assessment: A Casebook over a decade ago, there have been a number of significant changes in the applicable law, ethics, science, and practice that have shaped the conceptual and empirical underpinnings of FMHA. The Second Edition of Forensic Mental Health Assessment is thoroughly updated in light of the developments and changes in the field, while still keeping the unique structure of presenting cases, detailed reports, and specific teaching points on a wide range of topics. Unlike anything

else in the literature, it provides genuine (although disguised) case material, so trainees as well as legal and mental health professionals can review how high-quality forensic evaluation reports are written; it features contributions from leading experts in forensic psychology and psychiatry, providing samples of work in their particular areas of specialization; and it discusses case material in the larger context of broad foundational principles and specific teaching points, making it a valuable resource for teaching, training, and continuing education. Now featuring 50 real-world cases, this new edition covers topics including criminal responsibility, sexual offending risk evaluation, federal sentencing, capital sentencing, capacity to consent to treatment, personal injury, harassment and discrimination, guardianship, juvenile commitment, transfer and decertification, response style, expert testimony, evaluations in a military context, and many more. It will be invaluable for anyone involved in assessments for the courts, including psychologists, psychiatrists, social workers, and attorneys, as well as for FMHA courses. A problem-based learning casebook, keyed to the newly released DSM-V. The clinical cases in this book are about real people suffering from psychopathology. Reviewing these cases will allow the early clinician to learn by observing the decision-making process of experienced clinicians. Reading this book is as close to a real-life experience as a reader can have without a patient in front of them. Each chapter is consistently organized to answer these central questions concerning clinical presentation: functional impairment; DSM diagnosis (keyed to DSM-V); epidemiology; differential diagnosis; etiology and pathogenesis; natural course without treatment; evidence-based bio-psycho-socio-spiritual treatment options; clinical course with management and treatment; systems-based practice issues; and legal, ethical, and cultural challenges. Designed as a clinical companion to the bestselling text, *Essential Psychopathology and Its Treatment: Third Edition*, this book's important lessons can also be learned by reading it as a stand-alone text. *Diagnosis in a Multicultural Context* provides mental health professionals with materials to practice the application of cross-cultural variations on standard diagnostic guidelines. Freddy A. Paniagua offers clinical case examples to illustrate the cross-cultural variations applicable in the assessment, diagnosis and treatment of clients from four major cultural groups: African Americans, American Indians, Asians, and Hispanics. *Working on the Frontline of Mental Health* is an account of the day-to-day work in psychological therapies, highlighting not only the complexities patients present but also their remarkable and moving stories of recovery after many years of adversity. Steve Sheward, a CBT therapist working on the frontline in the NHS and private practice, presents an overview of different psychological presentations, including depression, anxiety, PTSD, OCD, and panic disorder, amongst others. Each chapter provides a detailed description of the latest cognitive behavioural therapy approaches used to help clients overcome psychological challenges which is paired with compelling case studies that demonstrate their application. The book also outlines the challenges of continuing to deliver therapy during the COVID pandemic, as well as the demands placed upon the profession and the psychological challenges experienced by therapists. This book will be of interest to

a variety of mental health professionals, especially those trained in CBT, along with those who have personal experience with mental health problems. The Mental Health Review Board is a statutory tribunal established under the Mental Health Act 1986 (Vic.) to conduct reviews of, and hear appeals by, people with a mental illness being treated involuntarily, either as inpatients or on community treatments orders. Casebook III is a comprehensive collection of significant decisions during the period 1997-2003. Two casebooks previously produced by the Board covering 1987-1997 are incorporated in this volume.
